

# THE PROJECT - *scientific Society*

“... YOU ARE LIMITED TO YOUR IMAGINATION AND IMAGINATION HAS NO LIMIT...”

## WHY GENIUS?

The most misuse resource on this planet is the human genius. Think about it, everything around you is the fruit of the discoveries of above average intelligence people. Electricity, tap water, the airplane, the computer, the spoon you use to eat, etc., and everything else in your surrounding have been initially designed and created by inventors of above average intelligence. Even the chair you sit on, without these geniuses inventors' help you would probably still be sitting on a rock somewhere in the middle of the woods. Furthermore, your life expectancy would be no longer than 20 years, as medicine also progressed through the geniuses' contribution to society. Everyone knows that and everyone acknowledges it.

Since it is obvious to everyone that the geniuses are the best people to turn to in order to solve problems, how come we do not put them as the leader of our industries and corporations? How many times have we seen people in higher management office or in the board of directors that have got the position simply because they have some relatives or some bribing capability?

CRAIG VENTER CREATES SYNTHETIC LIFE

Genius people are expert in solving problems, so why don't we use them to lead our industries? When you are in need of a heart surgery, you consult an expert; a heart surgeon expert, and you would never consider going to the fruit merchant of the street's corner store because he is very good at cutting fruits with a knife, even if everyone recommend him because is a very good relative.

Geniuses are expert in making the best possible decisions and this is why the “Lead and Promotion Group” of **SCI** will be exclusively composed of genius people. They will head all the different units and departments of **SCI** and all the major leading decisions that will affect **SCI** will be the result of a collective vote among them.

... and the other people?

When our brain tell the hand to pick an apple to eat, the other parts of your body never open a debate to decide which organ should tell the hand what to pick, and the hand never go on strike claiming to be abused by the brain... The brain knows very well that it can't pick an apple, can't eat and digest. In fact, it needs all the other body parts to optimally function. By making a good decision, the brain knows that the entire body, including itself, will benefit from it! As the brain and the hand are part on the same body they share the same importance as well; your brain cells are not more important than the cells of your hand, your heart, your liver, or any other cells.

Every cell of your body has a different function, a different task to do, and

when each cell performs its task the entire body is healthy and happy. There is no big ego conflict between your heart cell and your lung cell to determine which one is the most important. We see **SCI** as a multicellular organism where every citizen has a specific function to do. We all work together for us all in harmony and everyone has its huge importance simply because the better the others contribute to the whole society the more I will benefit from it.

In most corporations, when the feet tell the brain where to go, they end up dead, smashed at the bottom of the cliff...

*“When the leader does not lead to the problem's solution, it's because the problem is the leader”*

## SCI IS AIMING TO IMPROVE THE HUMAN LIVING CONDITION THROUGH THE APPLICATION OF SCIENTIFIC AND SOCIAL DISCOVERIES.

### RESEARCH FIELDS

#### THE MAIN RESEARCH FIELDS

##### Food

- Nutritional education & research
- Water and Liquid
- Plants and trees
- Living stock (cattle, fish...)
- Synthetic food (vitamins, supplements, processed food...)

##### Health

- Health education & research
- Natural medicine research
- Medicine & drug research
- Genetic engineering
- New equipment, Diagnosis,
- Treatment and Cure research
- New surgery research

#### ENERGY

- General Education & research
- Wind power
- Solar power
- Water (river dam, tidal wave, wave, rain)
- Geothermal
- Bio & Chemical
- Radio energy and waves
- Micro power and portable power
- Power accumulator
- Power distribution
- Other

#### MATERIAL, PHYSIC & CHEMISTRY

- Fundamental Research & education
- Building research
- Water treatment research technique
- Waste treatment research technique
- Odour and air treatment research technique
- Development of new Recycling technique and material

#### TECHNOLOGY INTEGRATION, DESIGN & ENGINEERING

Technical Education & research  
Research support (research equipments, tools & software development)  
StarCity Technical support  
Lab to Industry integration  
New construction supervision systems  
Other automatic management system

#### SOCIAL SUPPORT

As **SCI** is a new concept of community, at least for such a great number of people living together, it will be a wonderful social experiment center. Most social laws based upon a monetary system won't be applicable in **SCI**, therefore a completely new social organization system needs to be design in order to keep this new society functional and harmonious.

#### ENVIRONMENT

**SCI** will be the greenest city of the world, compared to any other of its size. No necessity for automobile transport, clean source of energy supply, smallest building and infrastructure foot print over nature (less than 1.6 m<sup>2</sup> per denizen) and almost 100% recycled sewage system, **SCI** is

aiming to be the first city in the world, not only to suppress global pollution, but in fact, to improve the environment quality of its surrounding. Every activity and research will be done by taking into account how to minimize the “[GLOBAL POLLUTION INDEX](#)” ([GPI](#)) thus reducing when not reversing the pollution generated, leading globally to a better and cleaner environment.

#### SAFETY & QUALITY

Around the world, most industries are developing safety and quality awareness by creating specific safety and quality department. In **SCI** we believe that safety and quality shouldn't be linked to a dedicated unit but largely integrated, through general education, in every research and activity as a living mode.

#### EDUCATION

Free education for everyone, using novel and high technology methods is the heart of all activities of **SCI**. After all, what is the point of making new social and scientific improvements if we can't spread and share them?
